

Home Server Setup Guide

1. Introduction

This guide provides step-by-step instructions to set up a home server with Proxmox, TrueNAS, VMs, containers, and additional services such as media streaming, web hosting, VPN, and SSL.

2. Hardware & Network Requirements

- 16GB+ RAM
- 1TB+ Storage (SSD + HDD)
- Ethernet Connection
- Static IP / Dynamic DNS setup
- Router Port Forwarding enabled

3. Install Proxmox VE

- Download ISO from proxmox.com
- Create bootable USB
- Install on bare metal
- Configure network settings

4. Set Up Storage (TrueNAS)

- Install TrueNAS Scale in a VM or separate machine
- Configure storage pools (ZFS recommended)
- Enable SMB/NFS shares

Home Server Setup Guide

5. Create Virtual Machines

- Windows 10 VM:
 - Upload ISO
 - Allocate 4GB RAM, 2 vCPU, 50GB disk
- Red Hat 9 VM:
 - Use RH 9 ISO
 - Allocate 2GB RAM, 2 vCPU, 30GB disk

6. Set Up Containers (CT)

- Media Streaming CT:
 - Use Jellyfin or Plex
- VS Code CT:
 - Use code-server container from [Linuxserver.io](https://linuxserver.io)

7. Web Hosting Configuration

- Use Nginx/Apache in a container
- Set up domains/subdomains
- Upload website content
- Use Certbot for SSL

8. VPN Configuration

- Install OpenVPN/WireGuard on a CT or VM

Home Server Setup Guide

- Configure server and client profiles
- Port forward VPN port on router

9. SSL Certificate

- Install Certbot in web container
- Obtain SSL for domain
- Configure Nginx/Apache with certs

10. Cloud Access & Case OS

- Use Tailscale or ZeroTier for secure remote access
- Set up cloud dashboard or NAS file access remotely
- Consider Case OS as front-end

11. Access Anywhere

- Use DDNS or public IP
- Set up port forwarding for:
 - HTTP/HTTPS
 - VPN
 - Proxmox Web UI
- Test local and remote access

Home Server Setup Guide

12. Final Notes

- Keep system updated
- Monitor system load
- Backup VMs and configs regularly
- Harden firewall and network rules
